XX
PT
     Composition for treating autoimmune diseases e.g. inflammatory bowel
PT
     disease in humans, comprises vector containing transforming growth
PT
     factor-beta under the control of inducible promoter -
XX
PS
     Example 1; Fig 1; 78pp; English.
XX
CC
     The invention relates to a composition containing a vector comprising a
CC
     gene encoding a regulatory transcription factor under the control of a
CC
     promoter encoding a transforming growth factor-beta (TGF-beta). The
CC
    vector is useful for expressing TGF-beta, such as TGF-betal, TGF-beta2
CC
     or TGF-beta3, its variants or homologues, by transfecting a cell which
CC
     is part of a host suspected of having an autoimmune disease, especially
CC
     inflammatory bowel disease (IBD), under conditions such that the
CC
     polypeptide encoded by the nucleic acid sequence in the vector is
CC
     expressed. The vector is delivered using a delivery system. The delivery
     of the vector results in substantial elimination of symptoms of the
CC
CC
     autoimmune disease and increased production of IL-10 by the host. The
CC
     composition is useful for treating various diseases with an autoimmune
```

```
CC
    component such as multiple sclerosis, rheumatoid arthritis, systemic
CC
    lupus erythematosus, insulin-dependent diabetes mellitus, sarcoidosis
CC
    and psoriasis, and also for assaying the expression of a gene in a cell.
CC
    The vector is further useful for screening of the effect of test
    compounds on cytokine (e.g. TGF-beta) expression of transfected cells.
CC
CC
    The present sequence is porcine TGF-betal mutant.

XX
     Novel nucleic acids and polypeptides, useful for treating disorders
PT
PΤ
     such as central nervous system injuries -
XX
PS
     Example 4; SEQ ID NO 2331; 10078pp; English.
XX
CC
     The invention relates to human nucleic acids (AAI57798-AAI61369) and
CC
     the encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC
     immunosuppressant and cytostatic activity. The polynucleotides are useful
CC
     in gene therapy. A composition containing a polypeptide or polynucleotide
     of the invention may be used to treat diseases of the peripheral nervous
CC
CC
     system, such as peripheral nervous injuries, peripheral neuropathy and
CC
     localised neuropathies and central nervous system diseases, such as
CC
     Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC
     lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC
     utilisation of the activities such as: Immune system suppression,
CC
     Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC
     and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC
     assays for receptor activity, arthritis and inflammation, leukaemias and
CC
     C.N.S disorders.
CC
     Note: The sequence data for this patent did not form part of the printed
CC
     specification.

CC
    Pre-TGF-beta-1 is a polypeptide of 390 amino acids. Post-transitional
CC
    cleavage of the precursor gives rise to the mature TGF-beta monomer.
CC
    The sequence for human TGF-beta was determined by direct amino acid
CC
    sequence analysis and by deduction from the TGF-beta cDNA. It is
    capable of inducing EGF-potentiated anchorage-independent growth of
CC
    target cell lines, and/or growth inhibition of neoplastic cell lines.
CC
    can be used for treating wounds, eg burns or epidermal ulcers.

    Compsn. for treating skeletal tissue deficiency - comprising
PT
PΤ
    transforming growth factor-beta and an osteogenic cell source in a
PT
    carrier
XX
PS
    Claim 3; Column 15-18; 19pp; English.
XX
CC
    This sequence represents human transforming growth factor-beta 1
CC
    (TGF-beta 1). This sequence and the sequence for human TGF-beta 3 (see
    AAR73598) are claimed within the scope of the invention. The invention
CC
CC
    is a composition consisting of a TGF-beta protein and an osteogenic cell
CC
    source (OCS) formulated in an acceptable carrier other than a bone
CC
    morphogenic cofactor. This composition can be used for the restoration
CC
    of bone deficiency. This provides for the generation of mature bone
CC
    only where it is required, without the inclusion of a specific
CC
    bone-inducing cofactor. This method can be used with any of the 5 human
    TGF-beta's or with TGF-beta from other species.

CC
    by AAT15720. The mature TGF beta 1 monomer is cleaved from the
CC
    precursor at the Arg-Arg dipeptide immediately preceding the mature
CC
    TGF-beta 1 NH2-terminus. It does not contain a recognisable N-terminal
CC
    signal peptide typical of most secreted proteins. The pre-TGF beta 1
CC
    contains several pairs of basic residues which could undergo
CC
    post-translational cleavage and give rise to separate polypeptide
CC
    entities. The precursor contains 3 potential N-glycosylation sites, none
CC
    of which are localised in the mature TGF beta 1. This is useful in
CC
    purification of the mature protein. TGF beta 1 can be used in, e.g. wound
CC
    healing.

XX
CC
     The invention relates to treating a subject with a disorder resulting
CC
     from insufficient insulin production, involving contacting the subject
CC
     with a transforming growth factor beta (TGF-beta) therapeutic. TGF-beta
CC
     polypeptides can be used for treating a subject with a disorder resulting
CC
     from insufficient insulin production, e.g. type I diabetes mellitus, and
CC
     for inducing outgrowth of pancreatic cells associated with pancreatic
CC
     duct tissue within a subject. A composition comprising a TGF-beta protein
CC
     may be useful in wound healing and treatment of neurological conditions
CC
     derived from acute, subacute or chronic injury to the nervous system,
CC
     including traumatic injury, chemical injury, vasal injury and deficits
CC
     (such as ischaemia resulting from stroke), together with
CC
     infectious/inflammatory and tumour-induced injury, aging of the nervous
CC
     system including Alzheimer's disease, chronic neurodegenerative diseases
CC
     including Parkinson's disease, Huntington's chorea, amyotrophic lateral
     sclerosis, spinocerebellar degenerations and chronic immunological
CC
CC
     diseases of the nervous system or affecting the nervous system, including
CC
     multiple sclerosis. This sequence represents the human TGF-beta-1
CC
     protein.

XX
PS
    Disclosure; Page 37-39; 44pp; English.
XX
CC
    The invention relates to a method for identification of a modulator
CC
    of the interaction between latency associated peptide (LAP) of
CC
    transforming growth factor-betal (TGF-betal) and integrin alphavbeta3.
CC
    The method is useful for identifying a modulator of the interaction
CC
    between LAP and integrin alphavbeta3. The method is useful for
CC
    immunomodulation, in the treatment of inflammatory disease, fibrotic
CC
    disease, cancer, diabetic retinopathy, bone resorption or osteoporosis,
CC
    and for preventing apoptosis administering the modulator to the host.
CC
    The modulator (inhibitor of the interaction between LAP-betal and
CC
    integrin alphavbeta3) is useful in the manufacture of a medicament for
CC
    immunomodulation. The modulator (activator of the interaction between
CC
    LAP-betal and integrin alphavbeta3 ) is useful in the manufacture of
CC
    medicament for preventing apoptosis. The modulator is useful for
CC
    treating a inflammatory or fibrotic disease such as chronic obstructive
CC
    pulmonary disorder, rheumatoid arthritis, psoriasis, restenosis,
CC
    atherosclerosis, liver fibrosis and asthma. The present sequence is
CC
    human TGF-betal protein.

    Claim 51; Page 59-61; 62pp; English.
XX
CC
    The invention relates to determining an individual's susceptibility to
```

```
renal failure and invovles detecting the presence of a genetic
CC
    polymorphism pattern in transforming growth factor beta 1 (TGFB1) gene in
CC
    a sample from an individual, where polymorphism pattern is associated
CC
    with renal failure. The method is useful for determining an individual's
CC
    susceptibility to the progression of renal failure. The nucleic acid
CC
    comprising a T(-509)C polymorphism of TGFB1 gene, or a polypeptide
CC
    comprising a sequence of 391 amino acids is useful for preparing a
CC
    medicament for retarding or preventing the progression of renal disease,
CC
    and for drug research purposes for retarding or preventing the
    progression of renal disease. Sequences ABV75386-88 represents the
CC
CC
    protein sequence for the TGFB1 G-allele of the Arq25Pro polymorphism
CC
    of exon 1.

    hypertension and hypotension
XX
PS
    Disclosure; Fig 1; 42pp; English.
XX
CC
    A new method for treating hypertension comprises administering a
CC
    transforming growth factor (TGF)-beta to an individual at a dose
CC
    effective for lowering blood pressure; the TGF-beta may be e.g.
CC
    mature TGF-beta, TGF-beta2, a mature TGF-beta1/beta2 hybrid, TGF-
CC
    betal precursor, a latent TGF-beta2 precursor, hybrid TGF-beta1/TGF-
CC
    beta2 precursor, a latent TGF-beta1 complex or a latent TGF-beta2
CC
    complex.

CC
    cDNA sequences were determined for human pre-TGF-beta-1 (AAQ56923),
CC
    pig TGF-beta-3 (AAQ56925) and human TGF-beta-3 (AAQ56926), and the
CC
    corresponding amino acid sequences were determined (AAR46227-29,
CC
    respectively). A genomic fragment corresponding to a human TGF-
CC
    beta-1 exon (AAQ56924) was also isolated and its amino acid sequence
CC
    determined (AAR46230). The sequences have been used in the
CC
    construction of vectors for the expression of recombinant TGF-
CC
    beta.

     oxide synthase gene transcription
XX
PS
     Disclosure; Fig 17; 52pp; English.
XX
     Transforming growth factor-beta 1 (TGF-beta 1) has been found to inhibit
CC
     inducible nitric oxide synthase (iNOS) gene transcription, esp. in
CC
     interleukin-1-beta (IL1-beta) stimulated rat smooth muscle cells, and at
CC
     a dose which does not inhibit consitutive NOS. TGF-beta 1 or 2
CC
CC
     (AAR83055) or their active fragments (esp. derived from the
CC
     carboxy-terminal 112 amino acids), can be used in the treatment of
CC
     hypotension, such as that associated with severe inflammation or septic
CC
     shock.

XX
CC
    This is the amino acid sequence of human transforming growth
CC
    factor-beta 1 precursor (preTGF-beta 1). It was deduced from
CC
    a preTGF-beta 1 cDNA sequence (see AAV52933). The invention relates
CC
    to the recombinant production of TGF-beta. Biologically active
CC
    TGF-beta is defined as being capable of inducing EGF-potentiated
CC
    anchorage independent growth of target cell lines and/or growth
CC
    inhibition of neoplastic cell lines. Nucleic acids encoding
CC
    TGF-beta have been isolated and cloned into vectors which are
CC
    replicated in bacteria and expressed in eukaryotic cells. TGF-beta
CC
    recovered from transformed cells is used in known therapeutic
CC
    applications.

A; Title: Separation, purification, and sequence identification of TGF-betal and
TGF-beta2 from bovine milk.
A; Reference number: A61439; MUID: 92189724; PMID: 1799413
A; Accession: B61439
A; Molecule type: protein
A; Residues: 204-209, 'X', 211-217, 'XX', 220-232 <JIN>
C; Comment: This polypeptide is composed of two polypeptide chains cross-linked
by disulfide bonds. It has been found in neoplastic and non-neoplastic tissues.
C; Comment: Type II TGF does not bind to the EGF receptor and lacks intrinsic
mitogenic activity, but in soft agar, it reacts synergistically with either type
I TFG or EGF, and induces cell proliferation. Cells grown in monolayer do not
respond in a similar manner to these growth factors, but morphologically do
acquire a transformed phenotype.

CC
    -!- FUNCTION: TGF-BETA IS A MULTIFUNCTIONAL PEPTIDE THAT CONTROL
CC
        PROLIFERATION, DIFFERENTIATION, AND OTHER FUNCTIONS IN MANY CELL
CC
        TYPES. MANY CELLS SYNTHESIZE TGF-BETA AND ESSENTIALLY ALL OF THEM
CC
        HAVE SPECIFIC RECEPTORS FOR THIS PEPTIDE. TGF-BETA REGULATES THE
CC
        ACTIONS OF MANY OTHER PEPTIDE GROWTH FACTORS AND DETERMINES
CC
        A POSITIVE OR NEGATIVE DIRECTION OF THEIR EFFECTS.
CC
    -!- SUBUNIT: Homodimer; disulfide-linked.
CC
    -!- SUBCELLULAR LOCATION: Secreted.
CC
    -!- SIMILARITY: Belongs to the TGF-beta family.

     "Transforming growth factor-beta 1 sequence and expression: no
RT
RT
     difference between NOD/Lt and C57Bl/6 mouse strains.";
RL
     Submitted (AUG-1998) to the EMBL/GenBank/DDBJ databases.
CC
     -!- FUNCTION: TGF-BETA IS A MULTIFUNCTIONAL PEPTIDE THAT CONTROL
CC
         PROLIFERATION, DIFFERENTIATION, AND OTHER FUNCTIONS IN MANY CELL
CC
         TYPES. MANY CELLS SYNTHESIZE TGF-BETA AND ESSENTIALLY ALL OF THEM
CC
         HAVE SPECIFIC RECEPTORS FOR THIS PEPTIDE. TGF-BETA REGULATES THE
CC
        ACTIONS OF MANY OTHER PEPTIDE GROWTH FACTORS AND DETERMINES
CC
         A POSITIVE OR NEGATIVE DIRECTION OF THEIR EFFECTS.
CC
     -!- SUBUNIT: Homodimer; disulfide-linked.
CC
     -!- SUBCELLULAR LOCATION: Secreted.
CC
     -!- SIMILARITY: Belongs to the TGF-beta family.
CC

CC
     -!- FUNCTION: TGF-BETA 1 IS A MULTIFUNCTIONAL PEPTIDE THAT CONTROLS
CC
         PROLIFERATION, DIFFERENTIATION, AND OTHER FUNCTIONS IN MANY CELL
CC
         TYPES. MANY CELLS SYNTHESIZE TGF-BETA 1 AND ESSENTIALLY ALL OF
CC
         THEM HAVE SPECIFIC RECEPTORS FOR THIS PEPTIDE. TGF-BETA 1
CC
         REGULATES THE ACTIONS OF MANY OTHER PEPTIDE GROWTH FACTORS AND
CC
         DETERMINES A POSITIVE OR NEGATIVE DIRECTION OF THEIR EFFECTS.

COMMENT
          The submitters believe that the chicken cDNA library was
          contaminated with porcine cDNA, and that the sequence is infact
          porcine TGF-beta-1.
                             27-MAR-1996.

          Clone distribution: MGC clone distribution information can be found
          through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
          Series: IRAL Plate: 6 Row: e Column: 11
          This clone was selected for full length sequencing because it
          passed the following selection criteria: Hexamer frequency ORF
          analysis.

Clone distribution: MGC clone distribution information can be found
         through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
         Series: IRAK Plate: 27 Row: e Column: 21
         This clone was selected for full length sequencing because it
         passed the following selection criteria: Hexamer frequency ORF
         analysis.

PT
    Composition for treating autoimmune diseases e.g. inflammatory bowel
PT
    disease in humans, comprises vector containing transforming growth
PT
    factor-beta under the control of inducible promoter
XX
PS
    Claim 1; Fig 1; 78pp; English.
XX
CC
    The invention relates to a composition containing a vector comprising a
CC
    gene encoding a regulatory transcription factor under the control of a
CC
    promoter encoding a transforming growth factor-beta (TGF-beta). The
CC
    vector is useful for expressing TGF-beta, such as TGF-beta1, TGF-beta2
CC
    or TGF-beta3, its variants or homologues, by transfecting a cell which
CC
    is part of a host suspected of having an autoimmune disease, especially
CC
    inflammatory bowel disease (IBD), under conditions such that the
CC
    polypeptide encoded by the nucleic acid sequence in the vector is
CC
    expressed. The vector is delivered using a delivery system. The delivery
CC
    of the vector results in substantial elimination of symptoms of the
CC
    autoimmune disease and increased production of IL-10 by the host. The
    composition is useful for treating various diseases with an autoimmune
CC
CC
    component such as multiple sclerosis, rheumatoid arthritis, systemic
CC
    lupus erythematosus, insulin-dependent diabetes mellitus, sarcoidosis
CC
    and psoriasis, and also for assaying the expression of a gene in a cell.
CC
    The vector is further useful for screening of the effect of test
CC
    compounds on cytokine (e.g. TGF-beta) expression of transfected cells.
CC
    The present sequence is a cDNA encoding porcine TGF-betal mutant.

CC
    This invention describes a novel method for modulating androgen receptor
    activity or androgen receptor-mediated transactivation activity in a
CC
CC
    cell. The method involves administering a compound which causes
CC
    modulation of the androgen receptors activity and the inhibition of
CC
    interaction between the receptor and a protein involved in a signal
```

CC transduction pathway. The compound also inhibits the interaction between CC the androgen receptor and a protein selected from Smad3, Smad4, Akt, transforming growth factor (TGF)-B and phosphatase and tensin homologues CC CCdeleted on chromosome 10 (PTEN) or their fragments. The compounds of the CC invention have cytostatic and antiproliferative activity. The obtained composition is useful for treating any disease, where uncontrolled CC CC proliferation or cellular proliferation occurs such as cancer, e.g. CC prostate cancer. This sequence represents the androgen receptor CC transactivation signalling pathway modulator E00973 described in CC the method of the invention. PS
XX
CC
    It was obtained by an analysis of several overlapping cDNAs and gene
CC
    fragments, leading to the detn. of a continuous sequence corresp. to the
CC
    TGF-beta-1 precursor mRNA. It is useful in constructing vectors that
    encode biologically active transforming growth factor (TGF-beta),
CC
CC
    operably linked to DNA that encodes a secretory leader (SL). It, or a
CC
    nucleic acid capable of hybridising with it, can also be labelled and
CC
    used in diagnostic assays for DNA or mRNA encoding TGF-beta or related
CC
    proteins.

PT
    Nucleotide sequence encoding transforming growth factor beta-3 -used as a
PT
    probe, or to produce TGF beta 3, for growth inhibition of certain normal
PΤ
    and neoplastic cells, eq A549.
XX
PS
    Disclosure; Fig. 1b; 61pp; English.
XX
CC
    Sequence encodes the 390 amino acid (AA) precursor transforming growth
CC
    factor-beta 1 (pre-TGF-beta 1) polypeptide. The 5' untranslated region of
    the TGF-beta 1 mRNA is 841 bases long, is purine rich and has a region of
CC
CC
    potential secondary structure. The TATA-like sequence in the 3' untrans-
CC
    lated region of the gene is presumably a polyadenylation signal. Mature
CC
    TGF-beta 1 comprises the C-terminal 112 AA's of pre-TGF-beta 1 and is
CC
    cleaved at the Arg-Arg dipeptide preceding its NH2 terminus. The nucleic
CC
    acid encoding the second subtype of TGF-beta (TGF-beta 3) is useful as a
CC
    probe or to produce TGF-beta 3 for inhibition of growth of normal and
CC
    neoplastic cells.

XX
    cDNA sequences were determined for human pre-TGF-beta-1 (AAQ56923),
CC
CC
    pig TGF-beta-3 (AAQ56925) and human TGF-beta-3 (AAQ56926), and the
CC
    corresponding amino acid sequences were determined (AAR46227-29,
CC
    respectively). A genomic fragment corresponding to a human TGF-
CC
    beta-1 exon (AAQ56924) was also isolated and its amino acid sequence
CC
    determined (AAR46230). The sequences have been used in the
CC
    construction of vectors for the expression of recombinant TGF-
CC
    beta.

XX
CC
    This nucleotide sequence codes for the human transforming growth
CC
    factor-beta 1 precursor (preTGF-beta 1, see AAW78785). It is a
CC
    composite of overlapping cDNA clones isolated from different cDNA
CC
    libraries (placenta, A172 glioblastoma, HT1080 fibroblastoma) using
CC
    TGF-beta exon (see AAV52936) restriction fragments as probes.
    The 3' region of the sequence was determined using cloned genomic
CC
    DNA. The invention relates to the recombinant production of
CC
CC
    TGF-beta. Biologically active TGF-beta is defined as being capable
CC
    of inducing EGF-potentiated anchorage independent growth of target
CC
    cell lines and/or growth inhibition of neoplastic cell lines.
CC
    Nucleic acids encoding TGF-beta have been isolated and cloned into
CC
    vectors which are replicated in bacteria and expressed in
CC
    eukaryotic cells. TGF-beta recovered from transformed cells is
CC
    used in known therapeutic applications. TGF-beta nucleic acids are
CC
    also useful in diagnosis and identification of TGF-beta clones.

PT
    Novel nucleic acids and polypeptides, useful for treating disorders
PT
     such as central nervous system injuries -
XX
PS
     Claim 1; SEQ ID NO 545; 10078pp; English.
XX
CC
     The invention relates to human nucleic acids (AAI57798-AAI61369) and
CC
     the encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC
     immunosuppressant and cytostatic activity. The polynucleotides are useful
CC
     in gene therapy. A composition containing a polypeptide or polynucleotide
CC
     of the invention may be used to treat diseases of the peripheral nervous
CC
     system, such as peripheral nervous injuries, peripheral neuropathy and
CC
     localised neuropathies and central nervous system diseases, such as
CC
    Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
    lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC
CC
    utilisation of the activities such as: Immune system suppression,
CC
    Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC
    and thrombolytic activity, cancer diagnosis and therapy, drug screening,
```

```
CC
   C.N.S disorders.
CC
   Note: The sequence data for this patent did not form part of the printed
CC
   specification.

PT
     Prodn. of simian transforming growth factor beta-1 - by culturing
PΤ
     transfected eucaryotic cells, and new precursor proteins, useful for
PT
    treating tumours.
XX
PS
    Disclosure; Page ?; pp; English.
XX
    The cDNA is prepd. from African green monkey cell line BSC-40 and is
CC
    expressed in eukaryotic cells in plasmid pSV2. There is 100% homology
CC
    between mature simian and human TGF-beta 1. The plasmid also contains
CC
```

```
CC
   the SV40 promoter and a selection marker, esp. DHFR.

PT
   Treatment of hypotension, esp. in septic shock - by administering
PT
   transforming growth factor-beta e.g. to inhibit inducible nitric
PT
   oxide synthase gene transcription
XX
PS
   Disclosure; Fig 15; 52pp; English.
XΧ
CC
   The cDNA encodes transforming growth factor-beta 1 (TGF-beta 1) which
CC
   has been found to inhibit inducible nitric oxide synthase (iNOS) gene
CC
   transcription, esp. in interleukin-1-beta (IL1-beta) stimulated rat
CC
   smooth muscle cells, and at a dose which does not inhibit constitutive
CC
   NOS. TGF-beta 1 or 2 (AAR83055) or their active fragments, can be used
CC
   in the treatment of hypotension, such as that associated with severe
CC
   inflammation or septic shock.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                     ò
                                                                                                                                                                The invention relates to a composition containing a vector comprising a gene encoding a regulatory transcription factor under the control of a promoter encoding a transforming growth factor-beta (TGF-beta). The promoter encoding a transforming growth factor-beta (TGF-beta). The vector is useful for expressing TGF-beta, such as TGF-beta). TGF-beta.

Or TGF-beta3, its variants or homologues, by transfecting a cell which is part of a host suspected of having an autoimmune disease, especially inflammatory bowel disease (TBD), under conditions such that the collypeptide encoded by the nucleic acid sequence in the vector is callivery of the vector is delivery system. The delivery of the vector results in substantial elimination of symptoms of the autoimmune disease and increased production of IL-10 by the host. The composition is useful for treating various diseases with an autoimmune composition is useful for treating various diseases with an autoimmune composition is useful for assaying the expression of a gene in a cell. The vector is further useful for assaying the expression of a gene in a cell. The vector is further useful for screening of the effect of test compounds on cytokine (e.g. TGF-beta) expression of transfected cells.

The present sequence is a cDNN encoding porcine TGF-betal mutant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                926
                                                                                                                                                                                                                                                                         activity or androgen receptor-mediated transactivation activity in action cell. The method involves administering a compound which causes modulation of the androgen receptors activity and the inhibition of interaction between the receptor and a protein involved in a signal transduction pathway. The compound also inhibits the interaction between the androgen receptor and a protein selected from Smad3, Smad4, Akt, transforming growth factor (IGF)-B and phosphatase and tensin homologues deleted on chromosome 10 (PTEN) or their fragments. The compounds of the invention have cytostatic and antiproliferative activity. The obtained composition is useful for treating any disease, where uncontrolled proliferation or cellular proliferation occurs such as cancer, e.g. prostate cancer. This sequence represents the androgen receptor transactivation signalling pathway modulator E00973 described in the method of the invention.
                                                                                                                                                                                                                                                                invention describes a novel method for modulating androgen receptor
                                                                                                                                                                                Modulating androgen receptor activity, by administering a compound that modulates receptor activity, inhibits receptor-signal transduction pathway/receptor-coactivator interaction or changes amount or receptor
